Project Name	Smart Lender: Machine Learning-Based Loan Approval Prediction System
Maximum Marks	

Empathy Map

Introduction

- Logs into the loan prediction application
 - Enters personal and financial information
 - Uploads required loan application documents
 - Submits the application for prediction
- Submits the application for prediction.
 - Reviews the prediction result.
 - Updates information if
- Anxious while waiting for the result.
Concerned about financial eligibility.
 - Confident when receiving clear predictions.
 - Satisfied if the process is quick and transparent.

CJ	User Goals	Pain Points	System Opportunities
• Fast approval prediction		[xngthy manual approval procedures	Intelligent Machine Learning prediction
• Accurate prediction		Lack of transparency	Faster processing
Secure personal information		Delayed lesponses	Consistent approval decisions

• Transparent decision process

Easy application submission

• Better financial planning

• Reduced manual effort

Confusing eligibility requirements

• Fear of application rejection

Repeated document verification

Improved customer experience

Secure digital application

Transparent prediction results

The Empathy Map helps in understanding the needs, expectations, behaviours, and emotions of a loan applicant interacting with the Smart Lender Loan Approval Prediction System. It provides valuable insights that assist in designing an intelligent, user-friendly, transparent, and efficient loan approval process.

Conclusion

The Empathy Map identifies the expectations, behaviours, concerns, and emotions of loan applicants throughout the approval process. These insights support the development of a Smart Lender Loan Approval Prediction System that is user-centric, efficient, transparent, secure, and capable of delivering accurate loan approval predictions while enhancing the overall customer experience.
