Project Name	Smart Lender: Machine Learning-Based Loan Approval Prediction System
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of the implemented code and the overall solution for the Smart Lender Loan Approval Prediction System. The project demonstrates working functionality, clean coding practices, and alignment with the defined requirements

Instructions:

- The code is well-structured, properly commented, and follows best practices for the chosen technology stack.
- The solution effectively addresses the core problem of loan approval prediction using Machine Learning.
- All required source files, configuration files, and setup instructions are included.

- The project repository is maintained using version control (GitHub).

Solution Summary

Programming Language(s)	Python, JavaScript, HTML5, CSS3, SQL
Framework(s) Used	Flask, Bootstrap 5
Key Features Implemented	User Registration & Login, Applicant Data Entry, Machine Learning Prediction, Approval / Rejection Result, Prediction History, Dashboard
Pending / Incomplete Features	Email / SMS Notifications, Admin Analytics Dashboard, Multi-language Support
Setup / Run Instructions	1. Clone the project repository from GitHub. 2. Create and activate a virtual environment. 3. Install required dependencies using requirements.txt. 4. Configure the MySQL database in config.py. 5. Run the Flask application using app.py. 6. Open a browser and access: http://127.0.0.1:5000/

Code Quality Checklist

S.N O	Criteria	Status (Yes / No)

1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

- The project follows a modular architecture with a clear separation of frontend, backend, database, and machine learning components.
- Functions and modules are designed to be reusable and maintainable.
- Comments and docstrings are included in all critical sections for better understanding.
- Exception handling is implemented for database operations and user inputs.
- The application has been tested locally and deployed successfully.
- Source code is maintained in a GitHub repository with regular commits and version tracking.
