Project Name	Smart Lender: Machine Learning-Based Loan Approval Prediction System
Maximum Marks	

Functional Features Overview:

This document outlines all the functional features included in the Smart Lender Loan Approval Prediction System. Each feature is described with its purpose, implementation status, and contribution to the overall system.

Feature Details

S.No	Feature Name	Feature Description	Module / Component	Status	Marks Contribution
1	User Registration	Allows new users to create an account and store personal details in the database	Authentication Module	Done	0.50
2	User Login	Enables registered users to securely log in using credentials	Authentication Module	Done	0.50
3	Applicant Details Input	Collects applicant data through a structured form for loan approval prediction	Frontend Module	Done	0.75
4	Data Preprocessing	Cleans, encodes, and scales input data before feeding into the ML model	Preprocessing Module	Done	0.75
5	Loan Approval Prediction	Predicts whether a loan application will be approved or rejected	ML Prediction Module	Done	1.00
6	Prediction Result Display	Displays prediction results along with probability score and applicant summary	Frontend Module	Done	0.75
7	Application History	Stores and displays previous loan applications and prediction results	Database Module	In Progress	0.50
8	Admin Dashboard	Allows admin to monitor users, applications, and system statistics	Admin Module	In Progress	0.25

Feature Metrics:

Feature Summary:

The Smart Lender Loan Approval Prediction System successfully implements all core functionalities required for loan approval prediction. Additional features such as application history and admin dashboard are under development to enhance system usability and management capabilities.

Feature Metrics:

Metric	Count Value
Total Features Planned	8
Total Features Implemented	6
Core Must-Have Features	5
Additional / Nice-to-Have Features	2
Features Tested & Verified	6

Feature Category Breakdown :

S.NO	Category	Features in Category	Example Features
	User Interface (UI)	3	Login Page, Applicant Form, Result Display
2	Backend / Logic	3	Data Preprocessing, Prediction Logic, Business Rules
3	Database / Storage	2	User Data Storage, Application History
4	API / Integration	1	Model Integration for Prediction
5	Security / Authentication	2	User Registration, Secure Login
