Project Executable Files

Introduction

The Project Executable files document describes the executable components, configuration file, learning models, templates, and supporting libraries required to successfully run the Learning—Based System. files collectively execution, learning prediction, user interaction, and database connectivity.

Executable Components

S.No	Executable Component	description	Purpose
1	app.py	Main Task application	Starts the web application coordinates all
2	Model.pkl	Trained Machine Learning to prediction	Classifies credit card approval predictions.
3	encodes.pkl	Label Encoder File	Converts categorical input values into machine-readable numerical values.
4	scaler.pkl	Feature Scaling File	normalize input features before prediction..
5	requirements.txt	Python Dependency File	Installs all required packages, project libraries and

6	templates/	Template Folder	Folder containing HTML files for the user interface (loan application form, results page, etc.).
7	Static/	JavaScript and Image Folder	Contains CSS, JavaScript, and other static files for frontend design and functionality.
8	README.md	Project Documentation	Project documentation including installation steps, project overview, and execution guidelines.

Key Features of Executable Files

- Modular project structure.
- Easy application deployment.
- Secure machine learning model loading.
- Efficient database integration.
- Responsive web interface.
- Scalable Flask architecture.
- Reusable software components.
- Simplified maintenance and future enhancements.

The executable components of the Smart Lender Loan Approval Prediction System provide a complete, modular, and maintainable software solution.
